

FNP Sales Analysis Dashboard – Project Insights

This document presents the key business insights identified from the FNP Sales Analysis Dashboard. The analysis focuses on customer spending behavior, revenue trends, order patterns, product performance, and city-wise sales contribution.

Key Performance Indicators (KPIs)

Metric	Value
Total Orders	1000
Total Revenue	■35,20,984
Order to Delivery Time	5.53 Days
Average Customer Spend	■3,520.98

Project Insights

1. Anniversary and Raksha Bandhan occasions generated the highest revenue among all events, showing strong seasonal demand during celebration periods.
2. Diwali contributed comparatively lower revenue, indicating lower customer purchasing activity during that occasion.
3. The Colors category generated the highest revenue contribution among all product categories.
4. Soft Toys and Sweets categories also performed strongly, contributing significantly to overall sales revenue.

5. Revenue trends by order time indicate peak sales activity during evening hours, especially between 6 PM and 9 PM.
6. Monthly sales analysis shows major revenue spikes during February and August, likely due to Valentine's Day and Raksha Bandhan seasonal demand.
7. The Magnum Set emerged as the top-performing product in terms of total revenue generation.
8. Quia Gift and Dolores Gift also contributed strongly to product-level sales performance.
9. Imphal and Dhanbad recorded the highest number of customer orders among the top-performing cities.
10. The average customer spending value of ₹3,520.98 indicates a relatively high order value per customer transaction.
11. The average order-to-delivery duration of 5.53 days suggests stable delivery operations and logistics performance.
12. The dashboard helps identify high-performing occasions, top-selling products, customer purchasing trends, and city-wise order distribution for business decision-making.

The FNP Sales Analysis Dashboard provides meaningful business insights through interactive visualizations, helping stakeholders monitor sales performance, customer behavior, seasonal demand, and operational efficiency. The project demonstrates practical data analytics and dashboard development skills suitable for a data analyst portfolio.
