

FNP Sales Analysis Dashboard – Executive Summary

Project Overview

This project is an interactive Sales Analysis Dashboard developed in Microsoft Excel to analyze sales performance, customer behavior, product trends, and operational efficiency for an online gifting business. The dashboard transforms raw sales data into actionable business insights using Pivot Tables, Pivot Charts, KPI Cards, and Slicers.

Business Objective

The objective of this project is to monitor business performance, identify revenue-driving occasions and categories, analyze customer spending patterns, and support data-driven decision-making through interactive visualizations.

Key Performance Indicators

KPI	Value	Insight
Total Orders	1000	Strong order volume
Total Revenue	■35,20,984	Healthy business performance
Avg. Customer Spend	■3,520.98	Good purchasing value
Order to Delivery Time	5.53 Days	Moderate delivery turnaround

Dashboard Insights

- Anniversary and Raksha Bandhan generated the highest revenue among all occasions.
- The Colors category contributed the highest category-wise revenue.
- Evening hours showed peak customer ordering activity.
- Revenue peaks were observed during February and August.
- Premium gift sets emerged as top-performing products.
- Cities such as Imphal and Dhanbad recorded high order volumes.

Tools & Technologies Used

Microsoft Excel, Pivot Tables, Pivot Charts, Slicers, KPI Reporting, Data Cleaning, Data Visualization

Conclusion

The FNP Sales Analysis Dashboard successfully converts raw business data into meaningful insights through interactive visualizations and KPI tracking. This project demonstrates practical skills in data analysis, dashboard design, and business intelligence reporting suitable for entry-level Data Analyst roles.
